St. John's Episcopal Church
West Hartford, Connecticut
Austin Organs, Inc. Op. 2761

St. John's Episcopal Church in West Hartford, Connecticut was designed by renowned architect Bertram Goodhue of Cram and Goodhue in 1905. The Austin Organ Company built a new organ, Opus 231, a two manual located in the large space at chancel left for the new building. In 1949, the Austin family gave a new three manual of 37 ranks. This instrument was destroyed by fire in 1993.

Architectural designs for reconstruction of the church were formulated over many months. We asked for, and the church incorporated in the design, many acoustical enhancements. The new space for the organ at chancel right is much larger than before, with sloped ceilings and generous openings to the chancel. The wood floor under the pews has been replaced with smooth concrete and the ceiling treated to enhance acoustics. A new narthex enclosure of finished oak and glass provides a generous entrance to the space.

The organ façade contains pipes from the Grand Orgue 8' Montre, Violone, Flute Harmonique and the Pedal 8' Octave Bass. The casework is a blend of extant and new.

The three manual drawknob console has a solid state multiple memory combination action. It is on a concealed dolly and can be in the choir for a service or front and center for a concert. It is fully MIDI compatible.

The Great organ is located in a chamber at chancel left while the Swell, Choir and Positiv are located at chancel right. The Pedal is located at chancel left with the 16' Open suspended from the ceiling of the chamber. The Antiphonal is in the rear of the sanctuary over the narthex. The generously scaled Principal choruses fill the nave with ease. Chorus reeds drawing on English and French traditions transform the ensemble in a blaze of color and fire. All of this is accomplished in the framework of the American classic tradition.

Specifications

GRAND ORGUE

Violon	16'	61 Pipes
Montre	8'	61 Pipes
Violon	8'	12 Pipes
